Question 1

We don't want to compare all students who are on probation with all students who are not on probation because the students at the top end of the gpa threshold are different in many aspects than students at the bottom end of the gpa threshold. As such, the underlying assumption that the control and treatment groups are comparable would not hold.

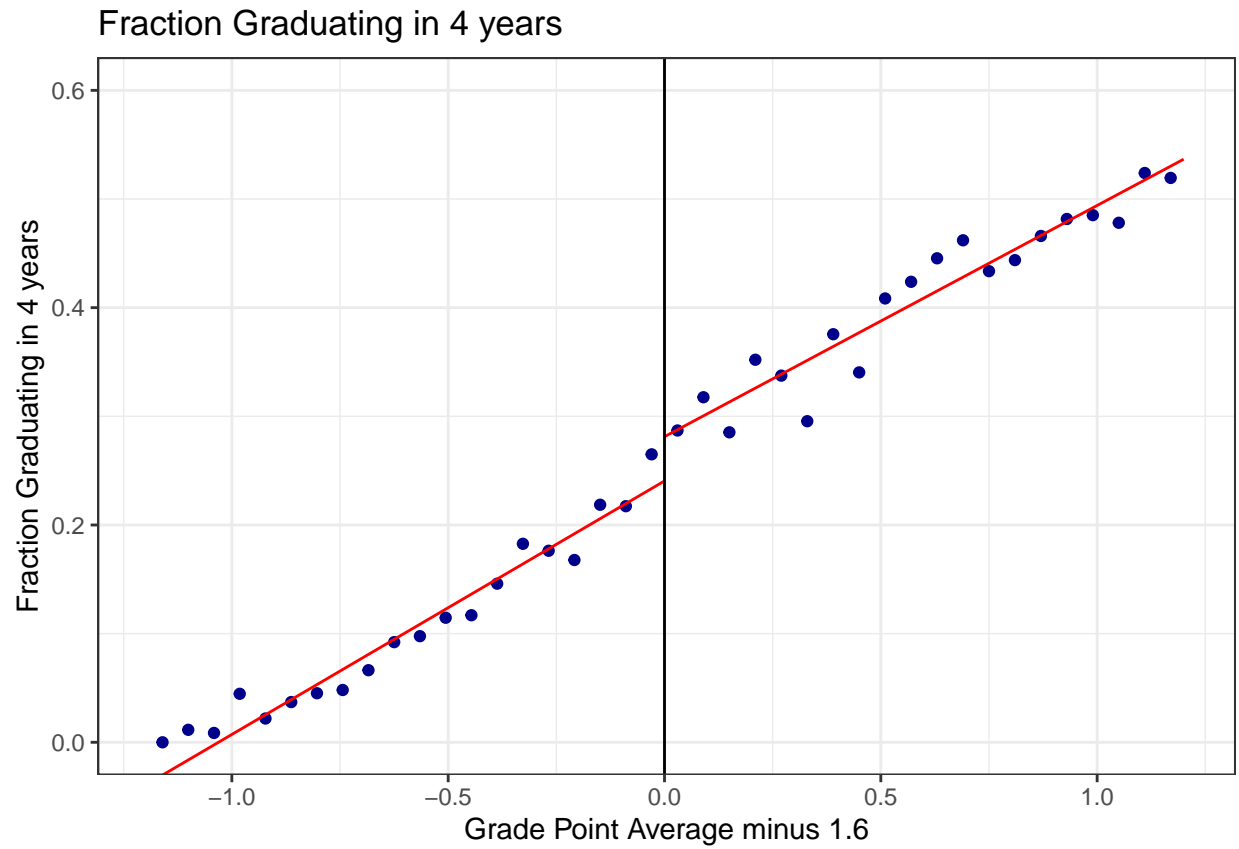

Question 2

The running variable is gpa average

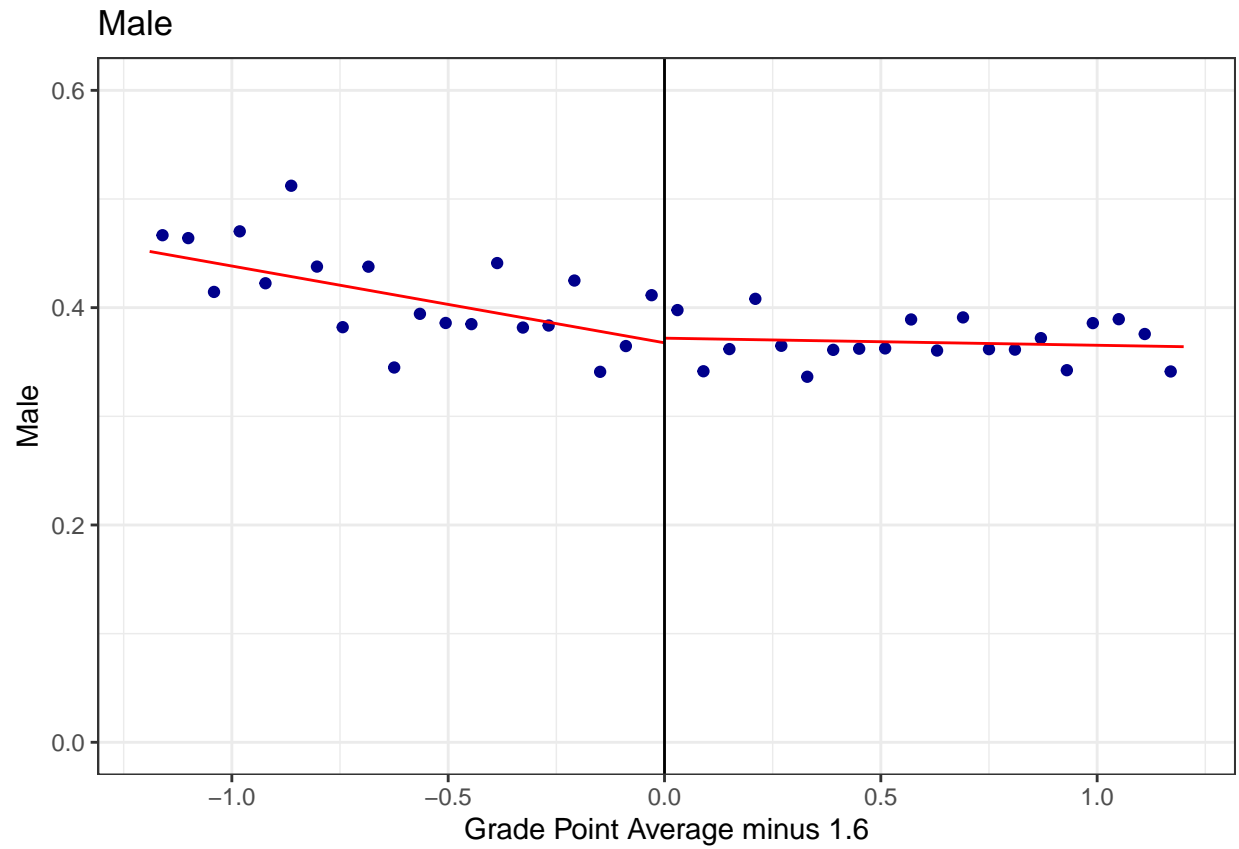

Question 3

Part a

```
## [1] "Mass points detected in the running variable."
```

```
## [1] "Mass points detected in the running variable."
```

```
## [1] "Mass points detected in the running variable."
```
